

Darth Vader's Tie Advanced assembly instructions

1. Parts laid out

2. Assemble the front canopy.

3. Mount the supports for the wing panels to the vertical panel supports.

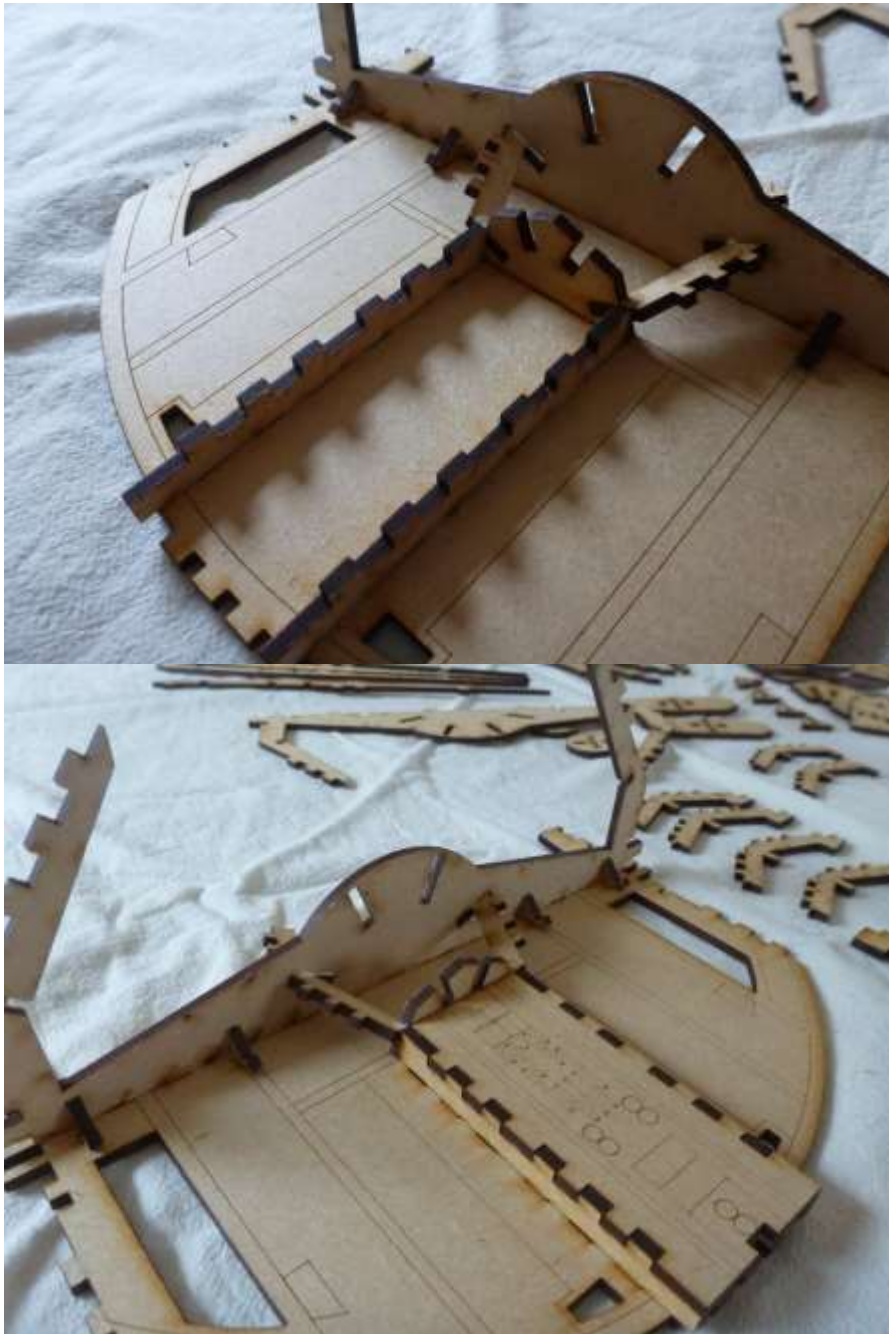

4. Mount the top vertical panel support to the main fuselage.

5. Mount the aft panel for the cockpit.

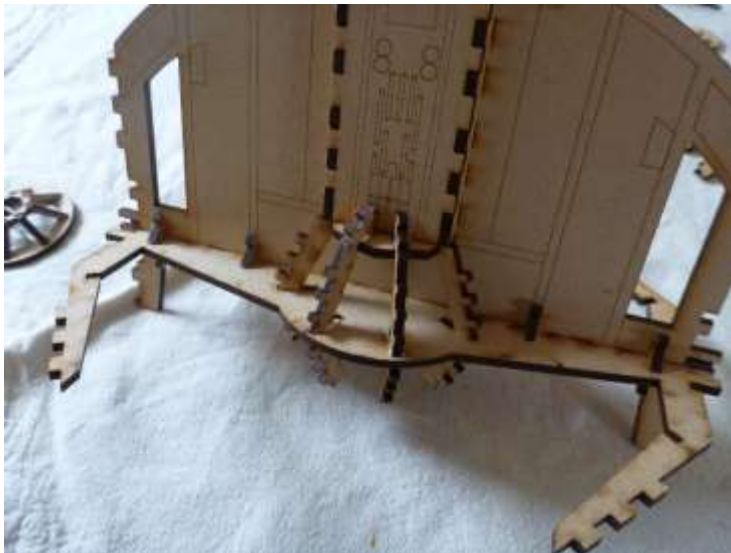

6. Mount the lower supports for the cockpit panels. (The ones that are a bit shorter than the original supports from Breakfastsandwich's Tie Fighter)

7. Assemble the top half of the engine box.
8. Repeat step 3-7 on the opposite side of the model.

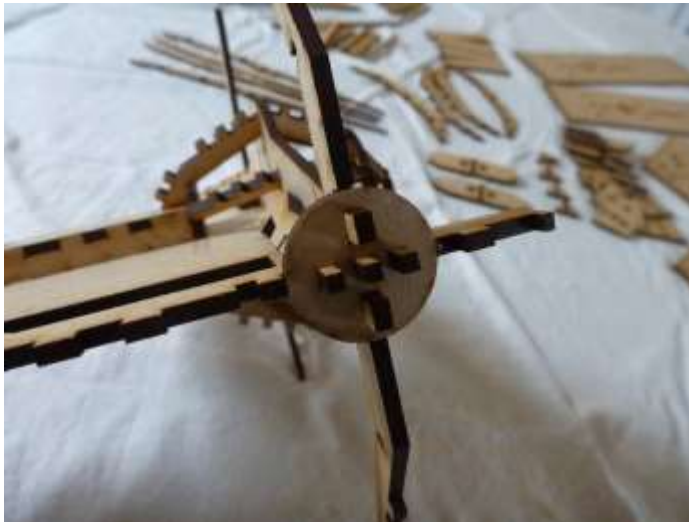

9. Finish the engine box by attaching the back plate.

10. Add the upper cockpit panel supports.

11. Add the assembled front canopy ring

12. Mount the inner panel assembly ring to the panel supports.

13. Attach the rear panel support strut.

14. Attach side panel.

15. Attach front panel support strut.

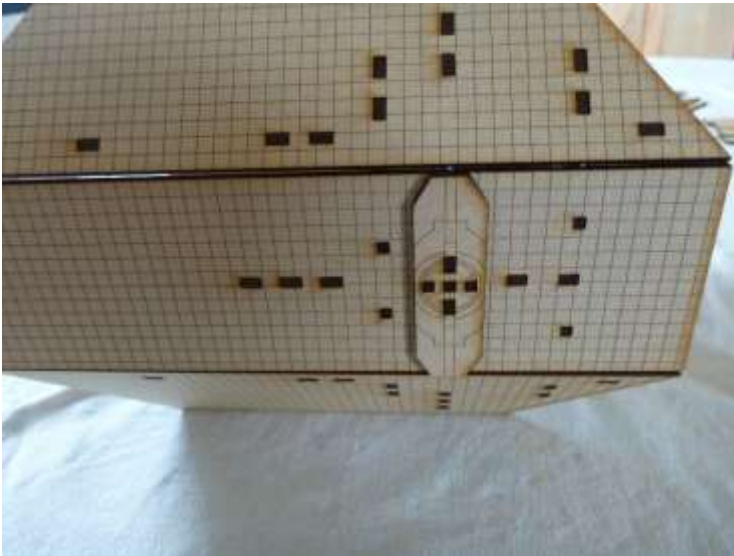

16. Attach upper and lower horizontal support struts.

17. Repeat step 12-16 on the opposite side

18. Attach upper and lower solar panels.

19. Attach outer panel supports on both sides.

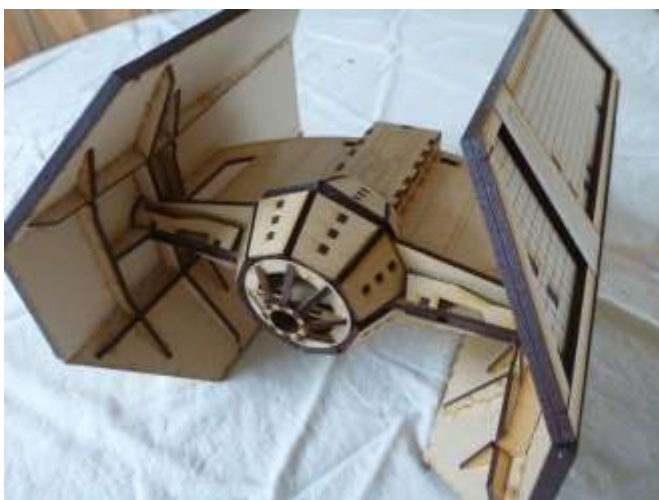

20. Attach all perimeter frames and mid-panel supports on the upper and lower panels as illustrated. Make sure to use the correct parts. Some of them differ just slightly in length. Everything should be flush along the edges.

21. Attach the perimeter frames to the side panels.

22. Attach the cockpit panels, front and rear on both upper and lower half of the model.

23. Front view of finished model.
